

Irvine Unified School District, CA renews the Schools Power® 6th Grade Program for the 2012-13 academic year.

Irvine Unified School District (CA) school district are renewing an innovative program to engage students in hands-on projects involving the worlds of earth science, math, and renewable energy, while applying STEM skills.

Students use standards-based lessons to apply science and math skills to investigate solar energy in real-world contexts.

Lessons combine interactive learning materials, rich media, and instructional simulations with cross-school learning activities.

All materials use current school-based technology.

San Francisco, June 19, 2012 - Schools Power (www.schoolspower.com), the renewable energy instructional development experts, announced the Irvine School District in California has renewed the Schools Power® 6th Grade program for the 2012-2013 academic year.

“Our ready-to-deploy units of study engage students with hands-on projects involving earth science, math, and renewable energy, while applying STEM skills. They help students succeed in math and science, while deepening their understanding of conservation and energies of the future,” said Elliott Josi, Schools Power CEO. “We are delighted to continue our work with the Irvine School District schools in supporting them to apply our lessons and web-based tools in their 6th Grade classrooms.”

“Our approach is unique in use of interactive materials for computers, tablets, and mobile devices to perform authentic investigations about energy alternatives for the world of the future. They are an easy way to add lessons in renewable energies that apply and extend student STEM skills,” said Penny Dyer, chief solutions officer of Schools Power. “Our 10-Step Professional Development Program empowers educators to engage students and is available in both webinar and in-person format.”

About Schools Power

Schools Power is the premier provider of Renewable Energy Curriculum and Professional Development that aligns with the STEM initiative.

Founded in 2011, Schools Power provides K-12 educators with an easy way to add innovative lesson components that are project-based, Common Core Standards-based, and easily fit into exiting Math, Science and Technology curricula.

Students apply, analyze, and evaluate their STEM skills to create meaningful projects that will inspire them to think independently about how they can conserve the earth's resources.

Students use interactive instructional materials for computers, tablets and mobile devices to perform authentic investigations of energy alternatives. Lessons combine interactive learning materials, rich media, and instructional simulations with intra- and inter-school learning activities designed for collaborative learning environments. All materials use current school-based technology.
